

Questions 1–10

05 Complete the table below.

Write **ONE WORD AND / OR A NUMBER** for each answer.

Art classes at Bramley Community Centre

Class	Things to bring	Fees / Timetable	Tutor
<i>Example</i> 'Movement and <u>light</u> ': painting in the style of French Impressionists	a set of 1 is essential	The cost is 2 \$ for two terms Monday evenings 6–8 p.m., Room 15	A local artist called Steve 3
'Clay basics': using the pottery wheel to make several 4	an old 5 would be a good idea	The cost is \$180 per term Every 6 6:30–8:30 p.m., Room 3	Theresa Clark – her work is displayed in the community centre
'Sketching Architecture': drawing old buildings, starting with the 7	people usually take a fold-up chair and a 8	The cost is \$160 per term Fridays 11–1 p.m. meet at the corner of Victoria Street and 9 Road	Annie Li Annie's cell phone number: 10

Questions 11–12

07 Choose **TWO** letters, **A–E**.

Which **TWO** things will employees need to do during their first week in their new office space?

- A find out about safety procedures
- B collect a new form of identification
- C move boxes containing documents
- D make a note of any problem that occurs
- E learn about new company technology

Questions 13–14

Choose **TWO** letters, **A–E**.

Which **TWO** steps have the company taken to improve the physical environment of employees' offices?

- A provided comfortable seating
- B installed a new heating system
- C used attractive materials
- D enlarged people's working space
- E replaced the old type of lights

Questions 15–20

07 Label the plan below.

Write the correct letter, **A–I**, next to **Questions 15–20**.

Plan of the renovated factory complex

- 15 Conference centre
- 16 New office space
- 17 Stores
- 18 Finance
- 19 Café
- 20 IT department

**Questions 21–26**

09 Complete the flow-chart below.

Choose **SIX** answers from the box and write the correct letter, **A–I**, next to **Questions 21–26**.

- | | |
|-------------------------------|------------------------------|
| A lifestyle changes | F effective packaging |
| B famous people | G toxic substances |
| C scientific findings | H processed foods |
| D industrial processes | I alarming images |
| E poor diet | |

History of vitamin supplements

Questions 27–30

09

Choose the correct letter, A, B or C.

- 27 Sam believes that more Australians are taking vitamin supplements because they**
- A** want to have control of their own health.
 - B** are advised to by local health authorities.
 - C** have benefitted from competition amongst manufacturers.
- 28 Lucy is concerned that the US vitamin supplement industry is not required to**
- A** follow the guidelines produced by a government agency.
 - B** list all the possible side effects of taking vitamins.
 - C** provide evidence that their products are effective.
- 29 When discussing the Danish experiment, Lucy and Sam conclude that vitamin supplements**
- A** are best used for preventing minor illnesses.
 - B** are not fully understood by researchers.
 - C** are harmful if taken in large amounts.
- 30 Lucy and Sam agree that stricter regulation of the vitamin supplement industry**
- A** would only lead to a slight decrease in sales.
 - B** might be necessary for some types of vitamin.
 - C** may not be welcomed by all consumers.

Questions 31–36

10

Complete the notes below.

Write **NO MORE THAN TWO WORDS** for each answer.

Insect Extinction in the 21st Century

The reasons why insect populations are declining

- In Europe, important plants are no longer found in fields or **31**
- In the Amazon rainforest, **32** might be the cause of butterfly and beetle loss.
- Globally, pesticides are affecting the spatial skills and **33** of bees.

The consequences of declining insect populations

- Insects are an essential part of the **34** in all places apart from Antarctica.
- Crop production will fall dramatically.
- Researchers can't discover any new **35**based on plants.

The possible ways to prevent insect extinction

- Governments must restrict the sale of pesticides.
- People must reduce their consumption of **36**

Questions 37–40

Complete the sentences below.

Write **ONE WORD ONLY** for each answer.

- 37** Sand from the Antioch Dunes was used to make for houses in the early 1900s.
- 38** The metalmark butterfly requires one type of Antioch Dunes plant for its
- 39** In recent years has led to the loss of wildlife in the Antioch Dunes.
- 40** The Antioch Dunes project shows how does not always require much land.

You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 below.

Why do people collect things?

People from almost every culture love collecting things. They might collect stamps, books, cards, priceless paintings or worthless ticket stubs to old sports games. Their collection might hang on the walls of a mansion or be stored in a box under the bed. So what is it that drives people to collect? Psychologist Dr Maria Richter argues that the urge to collect is a basic human characteristic. According to her, in the very first years of life we form emotional connections with lifeless objects such as soft toys. And these positive relationships are the starting point for our fascination with collecting objects. In fact, the desire to collect may go back further still. Scientists suggest that for some ancient humans living hundreds of thousands of years ago, collecting may have had a serious purpose. Only by collecting sufficient food supplies to last through freezing winters or dry summers could our ancestors stay alive until the weather improved.

It turns out that even collecting for pleasure has a very long history. In 1925, the archaeologist Leonard Woolley was working at a site in the historic Babylonian city of Ur. Woolley had travelled to the region intending only to excavate the site of a palace. Instead, to his astonishment, he dug up artefacts which appeared to belong to a 2,500-year-old museum. Among the objects was part of a statue and a piece of a local building. And accompanying some of the artefacts were descriptions like modern-day labels. These texts appeared in three languages and were carved into pieces of clay. It seems likely that this early private collection of objects was created by Princess Ennigaldi, the daughter of King Nabonidus. However, very little else is known about Princess Ennigaldi or what her motivations were for setting up her collection.

This may have been one of the first large private collections, but it was not the last. Indeed, the fashion for establishing collections really got started in Europe around 2,000 years later with the so-called 'Cabinets of Curiosities'. These were collections, usually belonging to wealthy families, that were displayed

in cabinets or small rooms. Cabinets of Curiosities typically included fine paintings and drawings, but equal importance was given to exhibits from the natural world such as animal specimens, shells and plants.

Some significant private collections of this sort date from the fifteenth century. One of the first belonged to the Medici family. The Medicis became a powerful political family in Italy and later a royal house, but banking was originally the source of all their wealth. The family started by collecting coins and valuable gems, then artworks and antiques from around Europe. In 1570 a secret 'studio' was built inside the Palazzo Medici to house their growing collection. This exhibition room had solid walls without windows to keep the valuable collection safe.

In the seventeenth century, another fabulous collection was created by a Danish physician named Ole Worm. His collection room contained numerous skeletons and specimens, as well as ancient texts and a laboratory. One of Ole Worm's motivations was to point out when other researchers had made mistakes, such as the false claim that birds of paradise had no feet. He also owned a great auk, a species of bird that has now become extinct, and the illustration he produced of it has been of value to later scientists.

The passion for collecting was just as strong in the nineteenth century. Lady Charlotte Guest spoke at least six languages and became well-known for translating English books into Welsh. She also travelled widely throughout Europe acquiring old and rare pottery, which she added to her collection at home in southern England. When Lady Charlotte died in 1895 this collection was given to the Victoria and Albert Museum in London. At around the same time in the north of England, a wealthy goldsmith named Joseph Mayer was building up an enormous collection of artefacts, particularly those dug up from sites in his local area. His legacy, the Mayer Trust, continues to fund public lectures in accordance with his wishes.

In the twentieth century, the writer Beatrix Potter had a magnificent collection of books, insects, plants and other botanical specimens. Most of these were donated to London's Natural History Museum, but Beatrix held on to her cabinets of fossils, which she was particularly proud of. In the United States, President Franklin D. Roosevelt began his stamp collection as a child and continued to add to it all his life. The stress associated with being president was

easier to cope with, Roosevelt said, by taking time out to focus on his collection. By the end of his life this had expanded to include model ships, coins and artworks.

Most of us will never own collections so large or valuable as these. However, the examples given here suggest that collecting is a passion that has been shared by countless people over many centuries.

Questions 1–6

Do the following statements agree with the information given in Reading Passage 1?

In boxes 1–6 on your answer sheet, write

TRUE *if the statement agrees with the information*

FALSE *if the statement contradicts the information*

NOT GIVEN *if there is no information on this*

- 1 Dr Maria Richter believes that people become interested in collecting in early childhood.
- 2 A form of collecting may have helped some ancient humans to survive.
- 3 Leonard Woolley expected to find the remains of a private collection at Ur.
- 4 Woolley found writing that identified some of the objects he discovered.
- 5 Princess Ennigaldi established her collection to show off her wealth.
- 6 Displaying artworks was the main purpose of Cabinets of Curiosities.

Questions 7–13

Complete the notes below.

Choose **ONE WORD ONLY** from the passage for each answer.

Write your answers in boxes 7–13 on your answer sheet.

Some significant private collections

15th–17th Centuries

- The Medici family made their money from **7**_____
- At the Palazzo Medici there was a hidden 'studio' which had no **8**_____
- Ole Worm liked to show when other scientists had made mistakes.
- Ole Worm made an important **9**_____ of a bird.

19th Century

- Lady Charlotte Guest created a collection of **10**_____, which she left to a museum.
- Joseph Mayer paid for **11**_____ that are still given to the public today.

20th Century

- Beatrix Potter did not give away her collection of **12**_____
- Franklin D. Roosevelt believed collecting helped him deal with the **13**_____ of his job.

Questions 14–19

Reading Passage 2 has six paragraphs, **A–F**.

Choose the correct heading for each paragraph from the list of headings below.

Write the correct number, **i–viii**, in boxes 14–19 on your answer sheet.

List of Headings

- i** A contrast between two historic approaches to documentary filmmaking
- ii** Disagreement between two individual documentary makers
- iii** A wide range of opportunities to promote documentary films
- iv** A number of criticisms about all documentary filmmaking in the past
- v** One film that represented a fresh approach to documentary filmmaking
- vi** Some probable future trends in documentary filmmaking
- vii** The debate about the origins of documentary filmmaking
- viii** The ability of ordinary people to create documentary films for the first time

- 14** Paragraph A _____
- 15** Paragraph B _____
- 16** Paragraph C _____
- 17** Paragraph D _____
- 18** Paragraph E _____
- 19** Paragraph F _____

Making Documentary Films

A

For much of the twentieth century, documentary films were overshadowed by their more successful Hollywood counterparts. For a number of reasons, documentaries were frequently ignored by critics and film studies courses at universities. Firstly, the very idea of a documentary film made some people suspicious. As the critic Dr Helmut Fischer put it, 'Documentary makers might have ambitions to tell the "truth" and show only "facts" but there is no such thing as a non-fiction film. That's because, as soon as you record an incident on camera, you are altering its reality in a fundamental way'. Secondly, even supporters of documentaries could not agree on a precise definition, which did little to improve the reputation of the genre. Lastly, there were also concerns about the ethics of filming subjects without their consent, which is a necessity in many documentary films.

B

None of this prevented documentaries from being produced, though exactly when the process started is open to question. It is often claimed that *Nanook of the North* was the first documentary. Made by the American filmmaker Robert J. Flaherty in 1922, the film depicts the hard, sometimes heroic lives of native American peoples in the Canadian Arctic. *Nanook of the North* is said to have set off a trend that continued through the 1920s with the films of Dziga Vertov in the Soviet Union and works by other filmmakers around the world. However, that 1922 starting point has been disputed by supporters of an earlier date. Among this group is film historian Anthony Berwick, who argues that the genre can be traced back as early as 1895, when similar films started to appear, including newsreels, scientific films and accounts of journeys of exploration.

C

In the years following 1922, one particular style of documentary started to appear. These films adopted a serious tone while depicting the lives of actual people. Cameras were mounted on tripods and subjects rehearsed and repeated activities for the purposes of the film. British filmmaker John Grierson was an important member of this group. Grierson's career lasted nearly 40 years, beginning with *Drifters* (1929) and culminating with *I Remember, I Remember* (1968). However, by the 1960s Grierson's style of film was being rejected by the Direct Cinema movement, which wanted to produce more natural and authentic films: cameras were hand-held; no additional lighting or sound was used; and the subjects did not rehearse. According to film writer Paula Murphy, the principles and methods of Direct Cinema brought documentaries to the attention of universities and film historians as never before. Documentaries started to be recognised as a distinct genre worthy of serious scholarly analysis.

D

Starting in the 1980s, the widespread availability of first video and then digital cameras transformed filmmaking. The flexibility and low cost of these devices meant that anyone could now be a filmmaker. Amateurs working from home could compete with professionals in ways never possible before. The appearance of online film-sharing platforms in the early 2000s only increased the new possibilities for amateur filmmakers. Nonetheless, while countless amateur documentaries were being made, perhaps the most popular documentary of 2006 was still the professionally made *An Inconvenient Truth*. New cameras and digital platforms revolutionised the making of films. But as critic Maria Fiala has pointed out, 'The argument sometimes put forward that these innovations immediately transformed what the public expected to see in a documentary isn't entirely accurate.'

E

However, a new generation of documentary filmmakers then emerged, and with them came a new philosophy of the genre. These filmmakers moved away from highlighting political themes or urgent social issues. Instead the focus moved inwards, exploring personal lives, relationships and emotions. It could be argued that *Catfish* (2010) was a perfect example of this new trend. The film chronicles the everyday lives and interactions of the social media generation and was both a commercial and critical success. Filmmaker Josh Camberwell maintains that *Catfish* embodies a new realisation that documentaries are inherently subjective and that this should be celebrated. Says Camberwell, 'It is a requirement for documentary makers to express a particular viewpoint and give personal responses to the material they are recording.'

F

The popularity and variety of documentaries today is illustrated by the large number of film festivals focusing on the genre around the world. The biggest of all must be the Hot Docs Festival in Canada, which over the years has showcased hundreds of documentaries from more than 50 different countries. Even older is the Hamburg International Short Film Festival. As its name suggests, Hamburg specialises in short films, but one category takes this to its limits – entries may not exceed three minutes in duration. The Short and Sweet Festival is a slightly smaller event held in Utah, USA. The small size of the festival means that for first timers this is the ideal venue to try to get some recognition for their films. Then there is the Atlanta Shortsfest, which is a great event for a wide variety of filmmakers. Atlanta welcomes all established types of documentaries and recognises the growing popularity of animations, with a category specifically for films of this type. These are just a few of the scores of film festivals on offer, and there are more being established every year. All in all, it has never been easier for documentary makers to get their films in front of an audience.

Questions 20–23

Look at the statements (Questions 20–23) and the list of people below.

Match each statement with the correct person, **A–E**.

Write the correct letter, **A–E**, in boxes 20–23 on your answer sheet.

- 20** The creation of some new technologies did not change viewers' attitudes towards documentaries as quickly as is sometimes proposed.
- 21** One set of beliefs and techniques helped to make documentary films academically respectable.
- 22** The action of putting material on film essentially changes the nature of the original material.
- 23** Documentary filmmakers have an obligation to include their own opinions about and analysis of the real events that they show in their films.

List of People

- A** Dr Helmut Fischer
- B** Anthony Berwick
- C** Paula Murphy
- D** Maria Fiala
- E** Josh Camberwell

Questions 24–26

Complete the summary below.

Choose **NO MORE THAN TWO WORDS AND A NUMBER** from the passage for each answer.

Write your answers in boxes 24–26 on your answer sheet.

Film Festivals

There are many festivals for documentary makers. For example, Canada's Hot Docs festival has screened documentaries from more than 50 countries. Meanwhile, the Hamburg Short Film Festival lives up to its name by accepting films no more than **24**_____ long in one of its categories. The Short and Sweet Film Festival is especially good for documentary makers who are **25**_____. And the Atlanta Shortsfest accepts numerous forms of documentaries including **26**_____, which are becoming more common.

You should spend about 20 minutes on **Questions 27–40**, which are based on Reading Passage 3 below.

Jellyfish: A Remarkable Marine Life Form

When viewed in the wild, jellyfish are perhaps the most graceful and vividly coloured of all sea creatures. But few people have ever seen a jellyfish living in its natural habitat. Instead, they might see a dead and shapeless specimen lying on the beach, or perhaps receive a painful sting while swimming, so it is inevitable that jellyfish are often considered ugly and possibly dangerous. This misunderstanding can be partly traced back to the 20th century, when the use of massive nets and mechanical winches often damaged the delicate jellyfish that scientists managed to recover. As a result, disappointingly little research was carried out into jellyfish, as marine biologists took the easy option and focused on physically stronger species such as fish, crabs and shrimp. Fortunately, however, new techniques are now being developed. For example, scientists have discovered that sound bounces harmlessly off jellyfish, so in the Arctic and Norway researchers are using sonar to monitor jellyfish beneath the ocean's surface. This, together with aeroplane surveys, satellite imagery and underwater cameras, has provided a wealth of new information in recent years.

Scientists now believe that in shallow water alone there are at least 38 million tonnes of jellyfish and that these creatures inhabit every type of marine habitat, including deep water. Furthermore, jellyfish were once regarded as relatively solitary, but this is another area where the science has evolved. Dr Karen Hansen was the first to suggest that jellyfish are in fact the centre of entire ecosystems, as shrimp, lobster and fish shelter and feed among their tentacles. This proposition has subsequently been conclusively proven by independent studies. DNA sequencing and isotope analysis have provided further insights, including the identification of numerous additional species of jellyfish unknown to science only a few years ago.

This brings us to the issue of climate change. Research studies around the world have recorded a massive growth in jellyfish populations in recent years and some scientists have linked this

to climate change. However, while this may be credible, it cannot be established with certainty as other factors might be involved. Related to this was the longstanding academic belief that jellyfish had no predators and therefore there was no natural process to limit their numbers. However, observations made by Paul Dewar and his team showed that this was incorrect. As a result, the scientific community now recognises that species including sharks, tuna, swordfish and some salmon all prey on jellyfish.

It is still widely assumed that jellyfish are among the simplest lifeforms, as they have no brain or central nervous system. While this is true, we now know they possess senses that allow them to see, feel and interact with their environment in subtle ways. What is more, analysis of the so-called 'upside-down jellyfish' shows that they shut down their bodies and rest in much the same way that humans do at night, something once widely believed to be impossible for jellyfish. Furthermore, far from 'floating' in the water as they are still sometimes thought to do, analysis has shown jellyfish to be the most economical swimmers in the animal kingdom. In short, scientific progress in recent years has shown that many of our established beliefs about jellyfish were inaccurate.

Jellyfish, though, are not harmless. Their sting can cause a serious allergic reaction in some people and large outbreaks of them – known as ‘blooms’ – can damage tourist businesses, break fishing nets, overwhelm fish farms and block industrial cooling pipes. On the other hand, jellyfish are a source of medical collagen used in surgery and wound dressings. In addition, a particular protein taken from jellyfish has been used in over 30,000 scientific studies of serious diseases such as Alzheimer’s. Thus, our relationship with jellyfish is complex as there are a range of conflicting factors to consider.

Jellyfish have existed more or less unchanged for at least 500 million years. Scientists recognise that over the planet’s history there have been three major extinction events connected with changing environmental conditions. Together, these destroyed 99% of all life, but jellyfish lived through all three. Research in the Mediterranean Sea has now shown, remarkably, that in old age and on the point of death, certain jellyfish are

able to revert to an earlier physical state, leading to the assertion that they are immortal. While this may not technically be true, it is certainly an extraordinary discovery. What is more, the oceans today contain 30% more poisonous acid than they did 100 years ago, causing problems for numerous species, but not jellyfish, which may even thrive in more acidic waters. Jellyfish throughout their long history have shown themselves to be remarkably resilient.

Studies of jellyfish in the class known as scyphozoa have shown a lifecycle of three distinct phases. First, thousands of babies known as planulae are released. Then, after a few days the planulae develop into polyps – stationary lifeforms that feed off floating particles. Finally, these are transformed into something that looks like a stack of pancakes, each of which is a tiny jellyfish. It is now understood that all species of jellyfish go through similarly distinct stages of life. This is further evidence of just how sophisticated and unusual these lifeforms are.

Questions 27–32

Do the following statements agree with the claims of the writer in Reading Passage 3?

In boxes 27–32 on your answer sheet, write

- YES** *if the statement agrees with the claims of the writer*
NO *if the statement contradicts the claims of the writer*
NOT GIVEN *if it is impossible to say what the writer thinks about this*

- 27** It is surprising that many people have negative views of jellyfish.
28 In the 20th century, scientists should have conducted more studies of jellyfish.
29 Some jellyfish species that used to live in shallow water may be moving to deep water.
30 Dr Karen Hansen's views about jellyfish need to be confirmed by additional research.
31 It is possible to reverse the consequences of climate change.
32 The research findings of Paul Dewar have been accepted by other academics.

Questions 33–36

Choose the correct letter, **A**, **B**, **C** or **D**.

Write the correct letter in boxes 33–36 on your answer sheet.

- 33** What is the writer doing in the fourth paragraph?
- A** comparing several different types of jellyfish
 - B** dismissing some common ideas about jellyfish
 - C** contrasting various early theories about jellyfish
 - D** rejecting some scientific findings regarding jellyfish
- 34** What does the writer conclude in the fifth paragraph?
- A** Jellyfish have advantages and disadvantages for humans.
 - B** Humans have had a serious negative impact on jellyfish.
 - C** Jellyfish will cause problems for humans in the future.
 - D** Humans and jellyfish are fundamentally similar.
- 35** What is the writer's main point in the sixth paragraph?
- A** Jellyfish may once have inhabited dry land.
 - B** Jellyfish improve the environment they live in.
 - C** Jellyfish have proved able to survive over time.
 - D** Jellyfish have caused other species to become endangered.
- 36** The writer refers to the 'scyphozoa' in order to
- A** exemplify the great size of some jellyfish.
 - B** illustrate that jellyfish are biologically complex.
 - C** explain why certain jellyfish may become extinct.
 - D** suggest that scientists still misunderstand jellyfish.

Questions 37–40

Complete each sentence with the correct ending, **A–F**, below.

Write the correct letter, **A–F**, in boxes 37–40 on your answer sheet.

- 37** Researchers working in Norway and the Arctic have shown that
38 The use of DNA sequencing and isotope analysis has proved that
39 Research into ‘upside-down jellyfish’ showed that
40 Following research in the Mediterranean Sea, it has been claimed that

- A** it was wrong to assume that jellyfish do not sleep.
- B** certain species of jellyfish have changed their usual diet.
- C** jellyfish can be observed and tracked in ways that do not injure them.
- D** one particular type of jellyfish may be able to live forever.
- E** there are more types of jellyfish than previously realised.
- F** some jellyfish are more dangerous to humans than once thought.

Writing Task 1

You should spend 20 minutes on this task.

The plans below show the layout of the ground floor of a museum in 1990 and in 2010.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Ground floor of museum 1990 and 2010

Writing Task 2

You should spend 40 minutes on this task.

Write on the following topic:

Many people nowadays spend a large part of their free time using a smartphone.

What do you think are the reasons for this?

Do you think this is a positive or negative development?

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

Speaking Part 1

The examiner will start by introducing him / herself and checking your identity. He or she will then ask you some questions about yourself.

Let's talk about what you do. Do you work or are you a student?

Work

- What's your job?
- Why did you choose this kind of work?
- What do you like most about your job?

Study

- What are you studying?
- Why did you choose this subject / these subjects?
- What do you like most about your studies?

The examiner will then ask you some questions about one or two other topics, for example:

Let's talk about spending time with friends.

- 1 *When do you spend time with your friends?*
- 2 *Do you usually go out with friends or spend time with them at home?*
- 3 *Do you prefer to spend time with a large group of friends or just a few?*
- 4 *Did you do different things with your friends when you were younger?*

Speaking Part 2

The examiner will give you a topic like the one below and some paper and a pencil.

The examiner will say:

I'm going to give you a topic and I'd like you to talk about it for one to two minutes. Before you talk, you'll have one minute to think about what you're going to say. You can make some notes if you wish.

[1 minute]

All right? Remember you have one to two minutes for this, so don't worry if I stop you. I'll tell you when the time is up. Can you start speaking now, please?

Describe your favourite item of clothing

You should say:

what the item of clothing is

what it looks like

when and where you got this item of clothing

and explain why this is your favourite item of clothing.

The examiner may ask one or two rounding off questions when you have finished your talk, for example:

- *Do you enjoy shopping for clothes?*

Speaking Part 3

The examiner will ask some general questions which are connected to the topic in Part 2, for example:

We've been talking about your favourite item of clothing. I'd like to discuss with you one or two more general questions relating to this. First, let's consider different types of clothes.

- *What kinds of clothes do young people like to wear in your country?*

Let's talk about shopping habits now.

- *Will people continue to shop in small shops and markets in the future?*

Finally, let's talk about the fashion industry.

- *What contribution does the fashion industry make to a country's economy and reputation?*

TIP

The examiner will select either the questions about work or the ones about study depending on your answer to this question

TIP

Listen carefully to the questions. Questions 1-3 are about the present, while Question 4 is about the past.

TIP

If you don't understand some words on the task, the examiner can say them in a simpler way for you. Just tell the examiner you don't understand. You won't lose marks for this.

TIP

Don't worry if you are still speaking when the examiner tells you to stop. It's better to speak right up to the 2-minute limit than to speak for 90 seconds.

TIP

The examiner will give marks across all three parts of the test, not a separate mark for each part.
