

## Questions 1–5

12

Complete the notes below.

Write **NO MORE THAN ONE WORD** for each answer.**New Apartment**

Example

Answer

**Landlady's Name:** Mary Jones**General**

- partly furnished
- no **1** ..... are allowed

**Kitchen**

- nice and big
- there is a new **2** .....

**Lounge**

- some **3** ..... will be built soon

**Bedroom**

- good clothes storage
- need to bring a **4** .....

**Bathroom**

- only a shower
- the water is heated by **5** .....

## Questions 6–10

12 Complete the form below.

Write **ONE WORD AND / OR A NUMBER** for each answer.

### Tenancy Form

#### Tenant details

- Full name: Andrew **6** .....
- Best contact: **7** andrew171@ ..... .com
- Driver's licence: **8** .....

#### Tenancy details

- Moving-in date: **9** .....
- Rent per week: **\$315**
- Bond paid: 10 \$ .....

**Questions 11–15.**

14

*Choose the correct letter, A, B or C.***11 What is new about the Writers' Festival this year?**

- A more international guests
- B extra time for questions
- C additional locations for events

**12 Tickets for the Wearable Art event**

- A are selling out quickly.
- B have been reduced in price.
- C must be booked in advance.

**13 Ocean Times at Bright's Beach is**

- A a sporting competition for adults.
- B an educational event for all ages.
- C a play day for young children.

**14 People going to the Artscape Exhibition**

- A should wear appropriate clothing.
- B must keep to the proper path.
- C need to arrive at a certain time.

**15 Tours of the Civil Theatre**

- A do not happen often.
- B have never happened before.
- C may happen more regularly in future.

### Questions 16–20

14 What comment does the speaker make about each of the following events?

Write the correct letter, **A**, **B** or **C**, next to questions 16–20.

You may use any letter more than once.

#### Comments

- A** the location has changed
- B** transport will be a problem
- C** the event might be crowded

#### Events

- 16** Night Market .....
- 17** Buskers Festival .....
- 18** Stand Up for Kids .....
- 19** Sunday Unplugged .....
- 20** Ignite Dance Finals .....

16

**Questions 21–22***Choose **TWO** letters, **A–E**.*

What **TWO** problems do the students identify with ‘learning videos’?

- A** Babies lose interest too quickly.
- B** Babies need to explore things.
- C** Babies want to be with other babies.
- D** Babies’ eyes may be damaged.
- E** Babies should have contact with adults.

**Questions 23–24***Choose **TWO** letters, **A–E**.*

When discussing the ‘present research’, Maia is surprised that

- A** ordinary people have altered their habits.
- B** the findings are very detailed.
- C** most babies behave the same way.
- D** boys and girls like different toys.
- E** the methodology has been criticised.

**Questions 25–26***Choose **TWO** letters, **A–E**.*

What impresses the students about the bilingual experiment in Spain?

- A** the long-term effects of the lessons
- B** the large number of research subjects
- C** the fact that the children enjoyed themselves
- D** the fact that teachers had the same training
- E** the response of schools to the findings

### Questions 27–30

16

*What was the finding of each of the following research studies?*

Choose **FOUR** answers from the box and write the correct letter (**A–F**) next to **Questions 27–30**.

#### Findings

- A** Babies understand cause and effect.
- B** Babies like physical exercise.
- C** Babies like their actions to be copied.
- D** Babies are excited by surprises.
- E** Babies recognise basic grammar.
- F** Babies like to help other people.

#### Research studies

- 27** Dr Pritchard's study .....
- 28** The three-year-olds study .....
- 29** Professor Michelson's study .....
- 30** The United States study .....

## Questions 31–40

17

Complete the notes.

Write **ONE WORD ONLY** for each answer.**The Engineer Sarah Guppy, 1770–1852****Background**

- women were active in many areas of 19<sup>th</sup>-century British society, e.g. Jane Harrison was the first female **31** \_\_\_\_\_
- by the end of the century there were 140 female dentists and 212 **32** \_\_\_\_\_, as well as many musicians and actors

**Sarah Guppy**

- was born in Birmingham and moved to Bristol with her husband
- designed bridges that could survive **33** \_\_\_\_\_
- built **34** \_\_\_\_\_ of the Clifton Suspension Bridge
- was a significant **35** \_\_\_\_\_ in the Clifton Suspension Bridge together with her husband
- designed a 'barnacle buster' that allowed **36** \_\_\_\_\_ to go faster
- helped stop **37** \_\_\_\_\_ near railway lines
- built an amusing machine for making different parts of **38** \_\_\_\_\_ at the same time
- designed an early type of **39** \_\_\_\_\_ equipment

**Conclusions**

- other women worked as engineers, e.g. Ada Lovelace and Hertha Marks Ayrton
- it was not until 1906 that a woman **40** \_\_\_\_\_ in engineering

You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 below.

## New Zealand's early crafts and traditions

The first groups of people to discover New Zealand came from Polynesia. Exactly when these explorers arrived has often been a matter of debate, but today the general understanding is that it was during the 13<sup>th</sup> century that their canoes eventually landed on New Zealand's shores. In some ways the new country must have seemed like an ideal place to settle: the land was fertile, and thick forests provided firewood, shelter and building materials. Still, life would have been challenging for the different Polynesian tribes, who had to adapt to a new environment. The tribes only began to refer to themselves as *Māori*, meaning 'ordinary people', when Europeans in search of new opportunities began arriving in the 18th century. To the Maori, of course, the European settlers and sailors were not 'ordinary', but very strange.

It was not only a knowledge of canoe-building and navigation that the Polynesians brought to New Zealand. They were also skilled craftsmen. There is archaeological evidence that the tools they produced were of high quality and would have enabled tribes to plant and harvest crops. Craftsmen were also occupied with making weapons such as knives and axes, which were used for both construction and fighting. Interestingly, some crafts that had once been popular in Polynesian islands were no longer done in New Zealand, although researchers are unsure why. Pottery is an example of this, despite the fact that the clay needed to make pots and bowls could easily be found in the new country.

The Maori word *whakairo* can be translated as 'decorative work' – this can refer to bone, wood and greenstone carving. Although Maori carvers were influenced by their Polynesian heritage, they developed their own style, including the curved patterns and spirals inspired by New Zealand plants. The same term can also apply to weaving; the crafting of, for example, woven baskets and mats all required knowledge and skill. Carving greenstone, or *pounamu* as it is called in Maori, was a long process, requiring great patience. Further, because of this mineral's rarity, any greenstone object, such as a piece of jewellery or cutting blade, was a prized possession. For that reason, it was the few people of high status rather than low-ranking members of a tribe who would possess such objects.

As New Zealand had no native mammals except for bats, dolphins and whales, Maori largely had to depend on plants to provide material for their clothing, including their cloaks. Weavers experimented with the inner bark of the *houhere*, the lacebark tree, but found it unsuitable. But the dried-out leaves and fibres of the flax plant provided a solution. Once a cloak had been woven from flax, it could be decorated. Borders might be dyed black or red, for example. In the case of superior ones made for chiefs or the more important members of a tribe, feathers from kiwi, pigeons or other

native birds might be attached. All flax cloaks were rectangular in shape, so had no sleeves, and neither was a hood a feature of this garment. Short cloaks were fastened around a person's neck, and came only to the waist. Pins made of bone, wood or greenstone allowed longer cloaks to be secured at the shoulder; these were a type that were often used for ceremonial occasions. Of course, the construction of the cloaks was influenced by the plant material available to Maori weavers. This meant that cloaks were loose-fitting, and while they protected wearers from New Zealand's strong sunshine, they were not useful during the winter months. A cloak made from fur or wool could provide insulation from the cold, but not so a cloak made of flax.

The warriors of a tribe required a different kind of cloak to help protect them. To create these special cloaks, the tough fibres of the mountain cabbage tree were used instead. It is not clear to researchers what the entire process involved, but they believe the fibres were left to soak in water over a period of time in order to soften them and make them easier to weave together. Later, once the whole cloak had been constructed, it would be dyed black. To do this, Maori weavers covered it in a special kind of mud they had collected from riverbeds. This was rich in iron due to New Zealand's volcanic landscape. The particular advantage of these cloaks was that the tough cabbage tree fibres they were woven from could reduce the impact of spear tips during a fight with enemy tribes. It is fortunate that some cloaks from the 1800s still survive and can provide us with further insight into the materials and construction techniques that Maori craftsmen used.

### Questions 1–6

Do the following statements agree with the information given in Reading Passage 1?

*In boxes 1–6 on your answer sheet, write*

- |                  |                                                     |
|------------------|-----------------------------------------------------|
| <b>TRUE</b>      | <i>if the statement agrees with the information</i> |
| <b>FALSE</b>     | <i>if the statement contradicts the information</i> |
| <b>NOT GIVEN</b> | <i>if there is no information on this</i>           |

- 1 It is now widely thought that humans reached New Zealand in the 13<sup>th</sup> century.
- 2 The first Europeans to come to New Zealand were keen to trade with Maori.
- 3 Members of Maori tribes were responsible for either tool- or weapon-making.
- 4 A craft that the Maori once practised in New Zealand was making pottery.
- 5 Weaving baskets and mats was seen as a form of decorative work by the Maori.
- 6 It used to be common for everyone in a Maori tribe to wear greenstone jewellery.

### Questions 7-13

Complete the table below.

Choose **NO MORE THAN TWO WORDS** from the passage for each answer.

Write your answers in boxes 7-13 on your answer sheet.

| Maori cloaks                   |                                                                                                                                                 |                                                                              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
|                                | flax cloaks                                                                                                                                     | warrior cloaks                                                               |
| <b>methods of construction</b> | Maori made flax cloaks by<br>– weaving leaves and fibres<br>– sometimes adding <b>7</b> ..... to the better cloaks                              | Weavers had to use<br><b>11</b> ..... to make cabbage tree fibres less stiff |
| <b>appearance</b>              | Flax cloaks were<br>– rectangular in shape<br>– designed without a <b>8</b> .....<br>– tied at either the wearer's neck or their <b>9</b> ..... | Mud containing<br><b>12</b> ..... was used to make the cloaks look black     |
| <b>good / bad points</b>       | Flax cloaks offered no<br><b>10</b> ..... during winter                                                                                         | <b>13</b> ..... could not easily go through the cloak's tough fibres         |

You should spend about 20 minutes on Questions 14–26, which are based on Reading Passage 2 below.

### Sleep should be prescribed: what those late nights out could be costing you

*Leading neuroscientist Matthew Walker on why sleep deprivation is bad for us – and what you can do about it*

- A** Matthew Walker dreads the question 'What do you do?' On an aeroplane it usually means that while everyone else watches movies, he will find himself giving a talk for the benefit of passengers and crew alike. To be specific, Walker is the director of the Center for Human Sleep Science at the University of California. No wonder people long for his advice. As the line between work and leisure grows more blurred, rare is the person who *doesn't* worry about their sleep. Indeed, it's Walker's conviction that we are in the midst of a 'catastrophic sleep-loss epidemic'. He has now written *Why We Sleep*, the idea being that once people know of the powerful links between sleep loss and poor health, they will try harder to get the recommended eight hours a night. Sleep deprivation constitutes anything less than seven. 'No one is doing anything about it but things have to change. But when did you ever see a national health service poster urging sleep on people? When did a doctor prescribe, not sleeping pills, but sleep itself? It needs to be prioritised.'
- B** Why are we so sleep-deprived in this century? In 1942, less than 8% of the population was trying to survive on six hours or less sleep a night; in 2017, almost one in two people is. Some reasons are obvious, but Walker believes, too, that in the developed world sleep is strongly associated with weakness. 'We want to seem busy, and one way we express that is by proclaiming how little sleep we're getting. When I give lectures, people wait behind until there is no one around and then tell me quietly: "I seem to be one of those people who need eight or nine hours' sleep." It's embarrassing to say it in public.'
- C** Walker has found clear evidence that without sleep, there is low energy and disease, and with sleep, there is vitality and health. More than 20 studies all report the same relationship: the shorter your sleep, the shorter your life. For example, adults aged 45 years or older who sleep less than six hours a night are 200% more likely to have a heart attack, as compared with those sleeping seven or eight. This is because even one night of sleep reduction will affect a person's heart and significantly increase their blood pressure as a result. Walker also points out that when your sleep becomes short, you are susceptible to weight gain. Among the reasons for this are the fact that inadequate sleep increases levels of the hunger-signalling hormone, ghrelin. 'I'm not going to say that the obesity crisis is caused by the sleep-loss epidemic alone,' says Walker. 'However, processed food and sedentary lifestyles do not adequately explain its rise. It's now clear that sleep is that third ingredient.'
- D** Sleep also has a powerful effect on the immune system, which is why, when we have flu, our first instinct is to go to bed. If you are tired, you are more likely to get sick. The well-rested also respond better to the flu vaccine so this is something people should bear in mind before visiting their doctors. Walker's book also includes a long section on dreams. Here he details the various ways in which deep sleep – the part when we begin to dream – helps us deal with our emotional experiences. He points to how important deep sleep is to young children. If they don't get enough, managing aggressive behaviour becomes harder and harder. Does Walker take his own advice when it comes to sleep? 'Yes. I give myself a non-negotiable eight-hour sleep opportunity every night, and I keep very regular hours. I take my sleep incredibly seriously because I have seen the evidence.'
- E** Sleep research shows that we sleep in 90-minute cycles, and it's only towards the end of each that we go into deep sleep. Each cycle comprises of NREM sleep (non-rapid eye movement sleep), followed by REM (rapid eye movement) sleep. 'During NREM sleep ... your body settles into this lovely low state of energy,' Walker explains. 'REM sleep, on the other hand is ... an incredibly active brain state. Your heart and nervous system go through spurts of activity.' Because we need four or five of these cycles to stay healthy, it's important for people to break bad sleep habits. For example, they should not be regularly working late into the night as this affects cognitive functioning. Depending on sleeping pills is also not a good idea, as it can have a damaging effect on memory.
- F** So what can individuals do to ensure they get the right amount of sleep? Firstly, we could think about getting ready for sleep in the same way we prepare for the end of a workout – say, on a spin bike. 'People use alarms to wake up,' Walker says. 'So why don't we have a bedtime alarm to tell us we've got half an hour, that we should start cycling down?' Companies should think about rewarding sleep. Productivity will rise and motivation will be improved. We can also systematically measure our sleep by using personal tracking devices, Walker says, and points out that some far-sighted companies in the US already give employees time off if they get enough of it. While some researchers recommend banning digital devices from the bedroom because of their effect on the sleep-inducing hormone melatonin, Walker believes that technology will eventually be an aid to sleep, as it helps us discover more about the way we function.

### Questions 14–18

Reading Passage 2 has six paragraphs, **A–F**.

Which paragraph contains the following information?

*Write the correct letter, **A–F**, in boxes 14–18 on your answer sheet.*

**NB** You may use any letter more than once.

- 14** a comparison between two different types of sleep that people experience
- 15** an explanation for some people not wanting to admit the amount of sleep they require
- 16** examples of different behaviours that have a negative impact on mental performance
- 17** a suggestion that medical professionals are not taking the right approach
- 18** a reference to changing trends in the average amount of sleep people get

### Questions 19–22

*Complete the sentences below.*

Choose **NO MORE THAN TWO WORDS** from the passage for each answer.

*Write your answers in boxes 19–22 on your answer sheet.*

- 19** Over 20 studies (A) have shown a person's ..... goes up (B) when they are sleep deprived.
- 20** Insufficient sleep (A) is one of three factors (B) which explain the ..... \*
- 21** People who are given the ..... by doctors (A) find it more effective if they sleep properly (B).
- 22** Walker has described (A) how a lack of deep sleep is linked to ..... in young children (B).

### Questions 23 and 24

Choose **TWO** letters, **A–E**.

Write the correct letters in boxes 23 and 24 on your answer sheet.

The list below mentions some things that individuals can do to ensure they get the right amount of sleep.

Which **TWO** of these things are recommended by Matthew Walker?

- A** taking a natural product that encourages sleep
- B** avoiding looking at brightly lit screens after dark
- C** negotiating later start times for work with employers
- D** keeping a regular record of hours spent sleeping
- E** reducing your activity level at a set time of day

### Questions 25 and 26

Choose **TWO** letters, **A–E**.

Write the correct letters in boxes 25 and 26 on your answer sheet.

Which **TWO** of the following statements are true of Matthew Walker?

- A** He is sometimes reluctant to admit what his profession is.
- B** He has based his new book on a series of lectures.
- C** He has experienced significant improvements in his health.
- D** He has carried out research into the meaning of dreams.
- E** He always makes sure he gets enough sleep each night.

You should spend about 20 minutes on **Questions 27–40**, which are based on Reading Passage 3 below.

## The future of cities

*Professor of Urban Planning Sarah Holmes looks at the challenges of urban living*

The World Health Organisation has produced a report predicting that 9.8 billion of us will be living on this planet by 2050. Of that number, 72% will be living in urban areas – a higher proportion than ever before. Presented with this information, governments have a duty to consider how best to meet the needs of city residents, and not just for the short-term. Certain problems associated with urban living have been highlighted by research company Richmond-Carver in its latest global survey. At the top of the list of survey respondents' concerns is the fact that competition amongst tenants for rental properties has driven the median price up – so much so people need to hold down two or more jobs to meet all their expenses. Another issue the survey highlighted is the difficulty commuters face. Overcrowding means that seats are often not available on long journeys, but more significant is that schedules are unreliable. Many studies have shown the effect that has on a country's productivity. Interestingly, certain problems seem more common in some cities than others: respondents from increasingly crowded European cities, including Manchester and Barcelona, commented on how their quality of life was affected by loud machinery, other people's music and car alarms. Something the survey failed to ask about was the value people placed on having access to nature in urban neighbourhoods. However, some countries are already moving forward. Singapore is a prime example; its rooftop gardens make the city a far more desirable place to live. It is the Singaporean government that is behind this push for sustainable living.

Perhaps some clearer government direction would benefit other cities. Take New York City, a place where I frequently meet up with other researchers in my field. Luckily for me, I am driven from the airport to the research centre, so do not need to navigate the freeways and constant congestion. Admittedly my experience of the urban lifestyle here is limited to the hotels I stay in, and the blocks within a three-kilometre walk. But whenever I leave my room in search of an outlet providing fruit or anything with nutritional value, none can be found. It seems ridiculous that this should be the case. New York has made great advances in redeveloping its museums and arts centres, but authorities must recognise that people's basic needs must be met first.

Sometimes these basic needs are misunderstood. In some urban areas, new residential developments are provided with security features such as massive metal fences and multiple gates in the belief that these will make residents safer. There is little evidence such steps make a difference in this way, but we do know they make residents feel reluctant to go outside and walk around their neighbourhood. Instead they are more likely to remain inactive indoors. Grassy areas inside fenced developments are hardly used by householders or tenants either. All this adds up to a feeling of being cut off from others.

So where are planners and developers going wrong? Inviting a group of locals to attend a consultation event is the conventional method for discovering what a community might want. The issue here is that it often attracts the same few voices with the same few wishes. But the internet now makes it possible for others to contribute. A community website can be a place where local people propose ideas for making their neighbourhood a better place to live. Developers that pay attention to these ideas can get a clearer picture of the things residents actually want and reduce the risk of throwing away money on things they don't.

An example of a project that truly meets the needs of residents is Container City – a development in London's Docklands area. Constructed from metal containers once used to transport cargo on ships, it is a five-storey architectural masterpiece. The containers have been turned into sunny work studios, and despite their limited size, some come with a bed, shower and kitchen unit. Smart planning and skilful construction mean they take up very little room. Furniture and fittings are made from recycled products. Other countries have their own versions of Container City – Amsterdam and Copenhagen have created container dormitories to house students – but the Docklands site shows how work and living areas can effectively be combined. The units are ideal for young entrepreneurs hoping to establish a business while keeping costs down.

Successful development is taking place in many urban areas around the world, and city planners have a duty to see for themselves the transforming effect this can have on residents' lives. There is no better way to do this than to visit these places in person. These might be neighbourhoods constructed for the first time, or developers might have transformed what was already there. In either case, the idea of cars determining urban planning, and indeed the whole concept of private car ownership, is now outdated and must be abandoned. Instead, the layout of an area under development must make it easier for people to meet up in pedestrianised zones and community spaces. At the heart of the development should be a cultural area, providing venues for art, music and street theatre. Such activities bring communities together, and do far more for positive relations than a new mall or shopping precinct. For this reason, these kinds of performance spaces should be prioritised. Finally, planners and developers must be obliged to create, within the same neighbourhood, different types of homes for wealthy professionals, for families, for the elderly and for young people just starting out. This kind of mix is essential to ensure people can buy a home in an area convenient for work, and for a community to stay alive.

### Questions 27–31

Complete the summary using the list of words, **A–H**, below.

Write the correct letter, **A–H**, in boxes 27–31 on your answer sheet.

#### **Survey on problems facing city dwellers**

The World Health Organisation has recently published data concerning **27** ..... in cities. This data should indicate to governments that they must think about ways to improve the lives of residents. According to a Richmond-Carver survey, the worst problem facing many city dwellers was **28** ..... The survey also indicated that in some cities, poor **29** ..... can impact dramatically on the economy. Another issue seems to be **30** ....., although this is more often mentioned by survey participants in European countries. Questions on people's views on the need for **31** ..... were unfortunately omitted from the survey, but countries like Singapore already seem to be making progress in this respect.

- |                                   |                               |                             |
|-----------------------------------|-------------------------------|-----------------------------|
| <b>A</b> noise pollution          | <b>B</b> recycling facilities | <b>C</b> green areas        |
| <b>D</b> employment opportunities | <b>E</b> population growth    | <b>F</b> affordable housing |
| <b>G</b> antisocial behaviour     | <b>H</b> public transport     |                             |

### Questions 32–35

Choose the correct letter, **A**, **B**, **C** or **D**.

Write the correct letter in boxes 32–35 on your answer sheet.

- 32** When staying in New York, the writer is frustrated by the fact that
- A healthy food cannot easily be obtained.
  - B bad road design causes daily traffic problems.
  - C certain venues cannot be reached by foot.
  - D visitors are all directed to the same kinds of place.
- 33** What point does the writer make about the use of security features?
- A It greatly reduces levels of criminal activity.
  - B It helps create a sense of community.
  - C It discourages people from taking exercise.
  - D It creates unnecessary fear among residents.
- 34** According to the writer, the problem with some planners and developers is that they
- A distrust the use of certain technologies for communication.
  - B create buildings using traditional construction methods.
  - C tend to put profits before the needs of residents.
  - D rely on the opinions of a narrow range of people.
- 35** What is the writer doing in the fifth paragraph?
- A explaining which construction materials are most sustainable
  - B emphasising the importance of clever design in small spaces
  - C comparing reasons for choosing to live in an unusual building
  - D proposing which specific urban locations should be developed

### Questions 36–40

Do the following statements agree with the views of the writer in Reading Passage 3?

*In boxes 36–40 on your answer sheet, write*

- YES**                      *if the statement agrees with the views of the writer*  
**NO**                        *if the statement contradicts the views of the writer*  
**NOT GIVEN**        *if it is impossible to say what the writer thinks about this*

- 36** City planners should travel to urban areas that are good models of development.
- 37** It is easier to plan an entirely new neighbourhood than redevelop an existing one.
- 38** In future, planners must think about the needs of car drivers as they design urban areas.
- 39** Cultural venues need to take second place to retail opportunities when developing a neighbourhood.
- 40** It is important that new housing developments encourage social diversity.

### Writing Task 1

You should spend 20 minutes on this task.

**The charts below show the proportion of expenditure by students, on average, at one university, in 2000 and 2010.**

**Summarise the information by selecting and reporting the main features, and make comparisons where relevant.**

Write at least 150 words.

**Proportion of expenditure by students - 2000**

**Proportion of expenditure by students - 2010**

**Writing Task 2**

You should spend 40 minutes on this task.

Write on the following topic:

**Some people feel that governments should take a large proportion of people's salaries to pay for necessary public services such as roads and schools. Others feel that high taxes are a bad thing.**

**Discuss both views and give your own opinion.**

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

## Speaking Part 1

The examiner will start by introducing him / herself and checking your identity. He or she will then ask you some questions about yourself.

*Let's talk about where you live. Do you live in a house or an apartment?*

*How long have you been living in this house / apartment?*

*What do you like about living in this house / apartment?*

*Do you think you will move to another place in the future?*

**TIP**

The examiner will record the Speaking test. This is for administrative reasons. Don't pay any attention to the recorder, just look at the examiner.

The examiner will then ask you some questions about one or two other topics, for example:

*Let's talk about the weather. What kind of weather did you like best when you were a child?*

*Does the weather ever affect your mood?*

*What is the best weather for studying or working?*

*Would you like to live in a country that has very hot or very cold weather?*

**TIP**

If you can't think of a good example from your own life, imagine a situation that is easy to talk about.

## Speaking Part 2

The examiner will give you a topic like the one below and some paper and a pencil.

The examiner will say:

*I'm going to give you a topic and I'd like you to talk about it for one to two minutes. Before you talk, you'll have one minute to think about what you're going to say. You can make some notes if you wish.*

[1 minute]

*All right? Remember you have one to two minutes for this, so don't worry if I stop you. I'll tell you when the time is up. Can you start speaking now, please?*

*Describe a time when you had a problem and someone helped you.*

*You should say:*

*what the problem was*

*who the person was who helped you*

*what this person did to help you*

*and explain how you felt when this person helped you.*

**TIP**

Remember to speak clearly, not too quickly and not too slowly. You will receive a mark for pronunciation and, in particular, how easy it is for the examiner to understand you.

The examiner may ask one or two rounding-off questions when you have finished your talk, for example:

*Did you tell your friends about this person who helped you?*

*Do you often help other people who have problems?*

**TIP**

You can also ask the examiner to repeat or rephrase a question if you're not sure that you've understood all of it. This won't affect your marks.

## Speaking Part 3

The examiner will ask some general questions connected to the topic in Part 2.

The examiner will say, for example:

*We've been talking about a time when you had a problem and someone helped you. I'd like to discuss with you one or two more general questions relating to this. First, let's consider helping in the home.*

*What can children do to help in the home? How can parents encourage their children to help with daily tasks?*

*Let's talk about helping in the local community now.*

*Do you think people help their neighbours enough nowadays?*

*Finally, let's talk about helping internationally.*

*Do you agree that everyone should contribute to international charities?*
